DESCRIPTION OF WEBSITE

The goal of this website is to allow users to input their sleep schedules onto a calendar that we have created where they can put the time slots in which they slept or got disrupted sleeping in. When they put that they got disrupted sleeping into their schedule, we can link to a third party to advertise a product that may help them in terms of sleeping. Along with this advertisement system that allows this website to keep on running due to the ad revenue we get, we also incorporated an alarm clock into the website along with a white noise maker to help users wake up and sleep respectively.

LIST OF MARKUP ELEMENTS USED

html, head, title, body, header, h1, h2, nav, ul, li, main, section, figure, figcaption, aside, footer, a, textarea
